### Sails, Tents or Umbrellas for external applications

#### Case Study

The owner wanted to provide a light weight waterproof covering for the veranda of this sunny, north facing, canal-side holiday home. The structure needed to complement the design of the home and, while providing shade for comfortable outdoor living, was not to make the area too dark. The client also required an umbrella for the front lawn and some drop blinds to filter the sun's rays from the side of the veranda.

Fabric : **Ferrari 702S®**

Fabricator : Genoa industries

#### Solution : **Ferrari 702S®** tensile structure material

The architect selected **Ferrari 702 S®** for the gazebo erected over the veranda. This light weight, tubular steel construction, with braided steel wire tensioning for strength and stability, offers permanent light shade as well as a comfortable living or eating area. Friends and family are protected from the rain showers which pass through the area.

The drop blind on the side of the veranda is made from **Soltis 86®**. This blind screens off the end of the veranda and filters the sun in that area.

For the front lawn the **Ferrari 702 S®** was successfully made into an umbrella which provides shade for those reclining at the water's edge.

Anti-capillarity treatment

## Anti-Capillarity Treatment

The construction of the polyester fibres prevent moisture and dirt from running through the inner layers of the material. This ensures the clear transparency of the material so that dark patches don't form overtime

Won't sag

Tear resistance

## Ultra Stable & Tear resistant

**Ferrari 702S®** is a textile designed according to an exclusive and patented process which ensures that the textile will not lose its shape or its inherent physical strength despite the tensions generated by wind, rain, hail or other climatic conditions. For this reason, **Ferrari 702S®** is preferred by architects and specifiers the world over for large exterior panels.

## Precontraint

Manufactured using the exclusive patented Precontraint Ferrari technology, the **Ferrari 702S®** textiles are maintained under tension throughout the entire production cycle. The resulting level of dimensional stability is extremely high, meaning the textiles do not deform during installation or over time.

## Fire Retardant

Fire retardant **Ferrari 702S®** is not inflammable and will only smoulder in the immediate presence of flames

## Easy Maintenance

Thanks to its new S2 varnish, maintenance of the **Ferrari 702S®** textiles merely involves a wash with water and a mild detergent. There is no mould, rotting or discolouration caused by moisture.

Fungistatic treatment

**7 Year Warranty** - backed by one of the leading manufactures in the world.

**Back-up and support from trained and experienced local suppliers.**

## Transparency and light

Visibility toward the outside

**Soltis 86®** maintains privacy and screens out sun glare, while at the same time retaining outward visibility which is particularly important in this application.

**Soltis 86®** filters and regulates the level of natural light according to your requirements. When the blinds are dropped you do not feel enclosed as **Soltis 86®** offers a remarkable degree of transparency, providing outward visibility that cannot be matched.

## Ultra Stable & Tear resistant

**Soltis 86®** is a textile designed according to an exclusive and patented process which ensures that the textile will not lose its shape or its inherent physical strength despite the tensions generated by wind, rain, hail or other climatic conditions. For this reason, **Soltis 86®** is preferred by architects and specifiers the world over for large exterior panels.
